

D2Refine Usability Study – Study Task Session

Introduction

Hello, my name is Deepak Sharma, software professional at Clinical Semantic Services at Division of Information Management & Analytic Systems, Mayo Clinic. I am conducting a usability study on behalf of the CACDE-QA project team (PI: Dr. Guoqian Jiang).

This is the second session where we request you to carry out following tasks on the comparable systems. We will be documenting your feedback by registering answers to the questions at the end of each task for each environment. We will also be noting down any observations that you might want to share, in addition to the following questions.

You are encouraged to:

- Use your any existing knowledge about the three environments.
- Verbalize your mental process as you complete the tasks. If you are comfortable, it could be useful, if you can talk out the process, as you go through the tasks.
- Share both positive and negative comments.

General Questions:

a. **Date:**

b. **Name:**

c. **Location:**

☐ On site (in-person)

☐ Remote

• Environment Usage Order:

_____: D2Refine _____: OntoMaton _____: RightField

• Favorite Order:

_____: D2Refine _____: OntoMaton _____: RightField

• Overall Comments:
